

Deep creek

Date

Tue, 04/15/2025 - 15:05

Activity

Skiing

Toured out Deep Creek to Zeppo's. Summer trail was largely melted out in the drainage. Despite warm temps and sticky, wet snow on E-S-W aspects, we still found about 4-10 inches of dry new snow over a MF crust on N aspects above 8500 feet. Snow in the Zeppo's burn was holding up surprisingly well from the previous night's freeze and was supportable through the afternoon. Large cornice formation on E aspects.

Region

Out of Advisory Area

Location (from list)

Town Hill
