

Avalanche on Saddle Peak

Saddle Peak
Bridger Range
2/10/2024
Code
L-N-R1-D1-S
Latitude
45.79430
Longitude
-110.93600
Notes

From obs: "Witnessed a natural [slide](#)/sluff today day off the top of 1/4 Saddle around 3:30 pm from the Bitterend. Visibility was poor could not see the starting point. The [slide](#) produced a large dust cloud running down the right side of the Football field, which would could have taken a person for a ride. The [slide](#) ran over the cliffs skiers left of Lundy's Luge. The debris covered all the tracks the from the high traverse across the Cueball. Probably would not have buried a person, but certainly would have rocked your world."

Number of slides
1
Number caught
0
Number buried
0
Avalanche Type
Loose-snow avalanche
Trigger
Natural trigger
R size
1
D size
1
Bed Surface
S - Avalanche released within new snow
Problem Type
Loose Dry
Snow Observation Source
[Avalanche](#)
Slab Thickness units
centimeters
Single / Multiple / Red Flag
Single Avalanche
Advisory Year
[23-24](#)
