

Avalanche on Henderson Mountain

Date

Sat, 03/02/2024 - 17:10

From email: "We were 3/4 the way up lulu today on the west side of the creek under the Henderson Bench. It broke 1/2 way down off the top ridge and ran all the way to the creek. Debris pile 20+ feet. Location matches super [slide](#) of 5-6 years ago, we were accross the drainage sitting on the "match sticks" layed out on the trail thru lulu. Ran into the Av center team about an hour before the incident, and as always thanked them for being the best and keeping us all informed! Nobody caught, remote trigged, but we were luckily across the drainage when it went!"

Region

Cooke City

Location (from list)

Henderson Mountain

Observer Name

Jake Tocco
